From the first activity to the last activity, the software delivers a complete solution footprint for handling all your enterprise planning and execution across multiple business function. Now you can determine what your enterprise value chain should look like, how much resources are necessary and which the most cost efficient vendor. You can secure better rates with vendors and customers, develop and execute enterprise planning for lean organization. The solution expands your business potentials with smooth integration that consolidates entire enterprise resource planning process.

Solution Overview

Syburst ERP Solution is a unique solution for managing enterprise resources management. The solution consists of two (2) platforms, web and windows-based application. Although it looks and feel similar, both have a slight different in their features. Business Advisory will assess and recommend which platform in shape with your business nature and requirement. The solution comprises of Financial, Procurement, Customer Relationship and Advanced Reporting.

Financial

Financial empowers your financial and accounting department to transform its function into that of strategic business unit, providing critical business insight your enterprise needs to improve financial health and performance. The solution is a comprehensive business management solution for financial and accounting for midsized and larger business that works like and with friendly user interfacing to help you improve productivity. It comprises of General Ledger, Fixed Asset, Account Receivable, Account Payable, and Cash Bank. With, you can be confident your business management solution is, and will continue to be, relevant to the needs of your people and the demands of your industry and business.

General Ledger

This advanced general ledger features that help you manage relationships between subsidiaries and the parent company. You can make transactions directly in a related company, which can help minimize workload. Use dimension hierarchies to analyze your company's financial data from different perspectives and transform raw data into actionable knowledge. It also enables you to make cash flow forecasts, so you can easily anticipate cash requirements and liquidity.

- Configure multiple and recurring journals with workflow and approval capability
- Handle multicurrency and exchange adjustments
- Create different types of budgets to predict your company's financial needs for a specific budget period
- Ability to track budget revisions
- Access Role Tailored business intelligence with out-of- the-box financial reporting, performance indicators, and analysis tools
- Extensive, flexible tax module features for different types of calculations and reporting
- Advanced financial statement that includes alternative rows

Fixed Asset

This module helps you to reduce time spend too much tracking the status of your fixed assets in the general ledger and elsewhere. With single sets of fixed asset data, you can achiever the highest possible return on your assets investment, makes key decision makers easily to ensure stakeholders are aware of, buy, subsequently use, and dispose business assets. Fixed Assets uses asset budgeting and multiple depreciation models to track the status of your company's fixed assets. Integration with other parts of **Syburst Solution** means you can order and receive fixed assets through purchase orders and inventory.

- Implement transaction reversals, additional asset groups and attributes, and asset adjustment reason codes
- Quickly update the replacement cost and insured value for selected fixed assets
- Manage the full life cycle from acquisition to depreciation and disposition
- Projects can be transferred as fixed assets for capitalization and depreciation purposes
